

USKT PROJECT OVERVIEW

Us Ketamine Token - TRON Mainnet

01 / Overview

Us Ketamine Token (USKT) is a gaming ecosystem token deployed on the TRON Mainnet. It is intended to support participation in game activities, virtual-item redemption, community rewards, and ecosystem payments. Specific utilities will be introduced progressively as the gaming ecosystem is developed and operated.

02 / Token information

Token name: Us Ketamine Token. Symbol: USKT. Network: TRON Mainnet. Previously provided contract address: TSuwScaCYdwCZZwQxgqN6fyypzbHj9KBxc. Please independently verify that this address corresponds to USKT. Stated fixed total supply: 9,600,000,000 USKT. No allocation, circulation, or distribution schedule is stated here because those details have not been provided.

03 / Intended utility

The proposed utility areas are game activity participation, virtual-item redemption, community rewards, and ecosystem payments. These are intended use cases, not a statement that any particular game, redemption mechanism, reward program, or payment integration is currently live.

04 / Development approach

Ecosystem utility is expected to be introduced in stages according to development and operations. Milestones on this site are directional only; no dates, launch commitments, or performance guarantees are provided.

05 / Risks and verification

Digital assets carry significant risks, including price volatility, loss of value, smart-contract vulnerabilities, and changes to ecosystem plans. USKT does not guarantee returns. Verify the token identity and contract address independently on TRONSCAN, understand the risks, and make your own decisions. Nothing in this document is financial, investment, or legal advice.
